

Create a virtual machine

- Basics
- Tags
- Review + create

Create a virtual machine that runs Linux or Windows. Select an image from Azure marketplace or use your own customized image. Complete the Basics tab then Review + create to provision a virtual machine with default parameters or review each tab for full customization. [Learn more](#)

i This subscription may not be eligible to deploy VMs of certain sizes in certain regions.

Project details

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * **i**

Azure for Students

Resource group * **i**

(New) startup_lunchpad

Create new

Instance details

Virtual machine name * **i**

VMStartupLunchPad

Region * **i**

(Asia Pacific) Australia East

Image * **i**

Ubuntu Server 24.04 LTS - x64 Gen2

i You will not be charged for up to 750 hours of usage for B1s or B2ats VMs per month. [Learn more](#)

Size * **i**

Standard_B2ats_v2 - 2 vcpus, 1 GiB memory (\$8.69) (free services eligible)

Administrator account

Authentication type **i**

☒ SSH public key

☐ Password

i Azure now automatically generates an SSH key pair for you and allows you to store it for future use. It is a fast, simple, and secure way to connect to your virtual machine.

Username * **i**

azureuser

SSH public key source

Generate new key pair

SSH Key Type

☒ RSA SSH Format

☐ Ed25519 SSH Format

i Ed25519 provides a fixed security level of no more than 128 bits for 256-bit key, while RSA could offer better security with keys longer than 3072 bits.

Key pair name *

VMStartupLunchPadKeyPair

Inbound port rules

Select which virtual machine network ports are accessible from the public internet. You can specify more limited or granular network access on the Networking tab.

Public inbound ports * **i**

☐ None

☒ Allow selected ports

Select inbound ports *

HTTP (80), HTTPS (443), SSH (22)

⚠ **This will allow all IP addresses to access your virtual machine.** This is only recommended for testing. Use the Advanced controls in the Networking tab to create rules to limit inbound traffic to known IP addresses.
